

**iMUNC 2019**

Background Guide

# **iBSERC**

International Biological Stability and Economic  
Recovery Committee

Chair: Lucas Kulin

Co-Chair: Hayden Mosher-Smith

iMUNC 2019

26 January 2019 | SoHo, Manhattan

Hello Delegates,

I am your chair Lucas Kulin, a junior at the iSchool, and I having been doing model UN for three years. I got into model UN because it was a place where I could practice diplomatic and debate skills where it was all imaginary. I often practice a machiavellian style of model UN with the ideal of the more chaos the better. I have always liked original content committees so I work hard to try and create a possible future world for delegates to explore and manipulate, this committee idea actually came to me in a dream I had last year specifically about the riots in the Iron Forest. Last year I ran the iATRC committee on international anarchism and it went pretty well up until the apocalypse. I hope that this year delegates can reach a solution to the issue at hand and push for a new united world.

Best wishes,

Lucas R. Kulin

Chair

Class of 2020

[lucask18@nycischool.org](mailto:lucask18@nycischool.org)

Hello delegates,

I'm relatively new to the MUN scene. I'll admit, I haven't seen much of you yet. But what I have seen has shown that you people in specific are the future. I have seen you work out debates over millions of lives more calmly and effectively then adults fighting over a bagel. That's why it's an honor to be co-chairing for a MUN veteran, Lucas Kulin. Lets save the world?

Best regards,

Hayden Mosher Smith

Co-Chair

Class of 2020

[h.moshersmith@gmail.com](mailto:h.moshersmith@gmail.com)

Dear Delegates,

The iSchool Model United Nations Conference specializes in creativity and uniqueness. By participating in our year long club we had the opportunity to create iMUNC for you to have an incredible model UN experience alongside members from all 5 boroughs, we are able to build and run an engaging and educational conference to help you become better delegates.

iMUNC was created last year and was a resounding success so we felt we should continue with what we did then: Chair and delegate independence. We pride ourselves on giving massive delegate freedoms in order to make sure that a story is told not just by the chairs but by delegates. Our theme this year of diplomacy under pressure will create an environment where delegates will be interacting with the world and act in its chaos. We hope to give delegates the opportunity to react to high stakes high risk situations where they are the deciding factor.

With seven committees with OC, Shows, Movies, and books we pride ourselves on our creativity. iMUNC 2019 will embody leadership skills, collaboration skills, diplomacy, Creativity (and a tiny bit of chaos).

A special thanks to our entire Secretariat for making this possible!

Sincerely,

Carmen Simons

Secretary General

# General information

## Biohacking Origins

In 2005 the concept for biohacking was introduced into the hacking/maker communities of San Francisco, USA. This movement evolved throughout the next ten years receiving little to no attention. Do it yourself biology became very popular in the maker community around 2016, and electronic implants became widely used among them.

The idea of biohacking is changing your appearance to match your personality. Biohacking has been around for quite some time, but it is not nearly as widespread as it is in this world. It was originally only done by careful selection of the foods and nutrients you take in, and one could change many aspects of their body with the proper diet or exercise.

The Biohacking community was mostly ignored until in february 2019, when the company “Sear-Tech” released the Insercom, a communication device that could be implanted into your right arm. By moving your hand and arm in certain ways you could send messages and talk to others. The Insercom made billions of dollars within months. Sear-tech refused to sell its technology outside the United States. Almost directly after these events, a Chinese company named “Dài” revealed that they could edit someone's genes to allow them to change their appearance before birth.

In January of 2020 the United States passed the Pure Human Act, stating that anyone who changes their appearance or genetics through genetic modification will no longer be considered a human, thus losing all rights and privileges associated with being human. This was a result of escalating protests across Europe that centered on religion. The government had no choice to give in after riots emerged across Europe with Christian and Islamic radicals attacking hospitals in the name of human purity.

This marked the beginning of the biological age.

## **Global Reaction and Legislation**

After the Pure Human Act, the rest of the world made steps to clarify and advance their standing on this new technology. Russia created the *один все* act, banning the use of genetic modification on humans and giving grants to the Russian company *железная душа*, a mechanical augmentation company that works with implantation. *железная душа* quickly developed further by working in partnership with Sear-tech. These companies merged in 2023 and took on the name META (Mechanical Enhancement/Treatment Assembly).

In Europe, nations quickly made moves to ban META products and started many campaigns to encourage people to avoid biohacking products. This initiative was gladly received by the people, creating an anti modification culture. In 2021, both Russia and the USA Advised their citizens with implants not to vacation in Europe as violent hate crimes were taking place against those who altered themselves.

China also made moves to counteract the spread of mechanical of implantation. In order to promote the products of *Dài*, Chinese law gave the death penalty to any found with any non government authorized electronic implants. The rapid development of *Dài* inspired the Chinese government to create the Genetic Enhancement Project (GEP) in 2024, a plan to recreate the human being to fit any field that needs them. The USA and Russia condemned this move saying that it was a step in the wrong direction, a statement from President Hanks read “I find this development truly disturbing, and if the People's Republic continues on this path, I am afraid the citizens of this country will suffer as greatly as those China tests on”.

## **Factionalization and Program Development**

The global reaction to this new technological field set the tone for the following years. The majority of conflicts were moral and ideological disputes between those with opposing opinions on biological enhancement.

In 2026 the EU passed the Human Freedoms Act, making it so any country legalizing modification, mechanical or genetic, within the EU will be “liberated” from their “oppressive” government. The idea of oppressive governments was developed after it was seen that

biohacking could turn into a military technology. This bill was developed after the Pure Human Act was passed as similar Islamic/Christian riots began in Europe. The bill came under fire from countries in the Balkans, such as Greece and Serbia. Greece immediately left the EU in Grexit saying that such a biased, unequal organisation will never stand for long. Greece's outstanding debt then almost immediately forced them into dependence on Chinese loans.

On July 1st of that year the Gershalt tests were performed in Shreve, Ohio, USA. The Gershalt tests allowed for soldiers to establish a direct interface into their weapons. These tests were part of a META program to develop weapons that increased soldier protection and lethality. The test's goal was to learn about human weapon compatibility. The soldiers were fitted with an experimental suit now known as a spine suit, labeled so as the suit works by connecting directly to the brain from the temple. The connectors then relay information to the suits weapons allowing the user to fire with only a thought. It took about a year to get the suits in production and soldiers were fitted with them soon after. The Gershalt tests then led to a government acquisition of META with current members purchasing the company and integrating the technologies and policies.

The GEP, in response to the Gershalt test, implanted genes in an embryo that allow for rapid development through a shortened childhood (1 year), and an increase in muscle growth. The new being was labeled Hatyaara, but is often referred to as a "Dispo," short for disposable. Dispo's are cloned in order to create a uniform military. They generally reach about 6 feet in size, around 82 Kg in weight, and have a life expectancy of 15 years after maturity. Condemnation from the nations of the EU and META came almost immediately. Russia and America both put heavy sanctions on China, the highest they have ever been since the 2018 sanctions. Chairman Ji released a statement after the sanctions were imposed: "We regret that the lack of understanding from the META nations has led to the regression of humanity by the return of imperialism". A few weeks later, an estimated 1 million women disappear from China. This disappearance was assumed to be done by the Chinese government however just like the security state in Xinjiang, it was ignored by the international community. It has been assumed that these women were used for testing in weapon development however no reports were confirmed as the government kept no records.

## **Recruitment and Alignment**

In 2028, Russian Prime Minister Vladimir Putin died of an infection of the heart. As his final act, he appointed Valery Gerasimov to replace him, even though this is against Russian procedure. Gerasimov promised to reunite the territories of true Russia and that “where there are Russians, there will be Russia.” The United States gave their condolences to the Russian people and said that they are looking forward to closer relations. Within his first month Russian president Boris Vladreshtoc was killed by a terrorist attack from a Ukrainian resistance group. Gerasimov became acting president and then announced martial law to prevent further attacks.

In July of 2028 Chairman Ji Xin Ping reached out to Abhas Khan, President of India, to create an alliance between the two nations. The meeting took place in the province of Kashmir, and ended in the signing of the Srinagar Accords. China withdrew from the territory and allowed for Indian occupation in exchange for India signing into a military and science pact. India, now part of the GEP, started experiments and designs as well as producing batches of Dispos. India now looked outward to their neighbors in an attempt to unify India through talks.

Saudi Arabia approached the United States on December 23 of that year in an effort to join META. With the Middle East finally at peace Saudi Arabia believed that it was time to focus outside their region and develop themselves. The Saudi government started as soon as they were accepted into the coalition.

The factionalization in the world led to the rush of countries signing up to these coalitions. Greece, Egypt, and Israel joined the META program. Soon after the admittance into META, Greece defaulted on their Chinese debt resulting in the Chinese embargo of Greece. The nations of Turkey, Brazil, and the Democratic Republic of the Congo joined the GEP.

The first deployment of dispo’s into conflict started 2029 in on July 11. Operation Wei led to the deployment of fifteen thousand dispos who were deployed to the Congo to eliminate anti-government groups. Using advanced Chinese weapons the operation achieved success within 6 weeks. 1.3 million people were killed, 54% of which were civilians. The UN condemned the direct action of China and the no mercy traits of their soldiers; China then announced that it

was leaving the UN in response to its “biased” nature. The other GEP nations followed China out of the UN facing strong condemnation from META, the EU, and the remaining UN nations.

## **War in Eastern Europe**

In February 2030 the Russian military state official announced a military exercise on the borders of Ukraine, Belarus, Estonia, and Latvia. These nations protested and called on NATO forces to be posted at their borders. The United States responded with their secession from NATO stating that Europe's lack of funding into the organization would exclude them from the war. The chaos that ensued allowed for Russian forces to enter Ukraine, thus taking control.

Russian soldiers equipped with spine suits marched into the Belarus and were met with the army of Belarus at Barysaw. Three days of fighting resulted in the defeat of Belarus and Russian occupation ensued.

Within two days of the seizure of Minsk, Russian tanks supported by spine suit infantry attacked the Baltic states. An immediate surrender from the Baltic countries was issued after it was received that the rest of NATO would not retaliate. The policy of European appeasement was greatly criticized by the general populace, with many comparing it to the similar actions taken in the 1930s. The European nations stated that they would not risk war over territorial claims.

One month after the Russian conquests began the regions under attack became fully occupied. The governments of invaded countries fled to Iceland to seek asylum, as well as to work with other governments to create a possible future for themselves and their people. Russia claimed their new territories as part of the Federation.

In July a transmission that stated “initiate plan Muromet” was intercepted and leaked by an unknown party. Several weeks later satellite imagery from China found large camps in the occupied areas presumably holding political dissidents and rebels. It was later found that these individuals were used as test subjects for new META designs, specifically on human weapon integration.

The development of these camps was condemned by the GEP and EU, calling them a grave human rights violation. The Russian response from Vladreshtoc was as follows: “It is a

great failure that the rest of the world fails to see the difference between a research facility and a prison camp”. No foreign journalist were allowed to look into this facility. However the German writer Anhika Krieg was found dead on the border of Poland. Her editor later informed the media that she had gone to investigate the Russian sites.

The international community met at the UN to discuss the Russian camps and actions against the Baltic region. Russia was put under heavy sanctions, specifically targeting oil, with a near complete global embargo taking place. The member countries of META denounced these actions and announced a complete boycott from the UN, a move that was called childish and immature by the rest of the world, although due to economic ties no sanctions could be placed.

### **GEP Aggression in Asia**

In 2032 China and India marched into Southeast Asia. They then proclaimed that it was “a region defined by their own histories,” and as a result it is inherently GEP territory. Urgent pleas from the nations of Myanmar, Bangladesh, Thailand, Vietnam, Laos, Cambodia, and Malaysia were sent out to the international community but were ignored as the fear of a global war pressed on in the minds of world leaders.

The invaded nations formed a military pact known as the Saigon Agreement, allowing the generals of all involved to have direct access to one another and to give the ability to declassify files from other governments within the bloc. The Saigon nations managed to rapidly set up a series of traps and within a week the armies were mobilized to prepare for guerilla war. The GEP invasion force consisted of 10 million dispo Mk 2 soldiers armed with new QBZ 105 rifles.

The QBZ 105 is a high caliber assault rifle capable of emptying its clip of 60 .50 caliber bullets in 10 seconds. The dispo Mk 2 is a modification on the original dispo soldiers but one that integrates weaponry into its biology; Dispos were given smaller stomachs and intestinal tracts in order to make room for larger lungs and heart to allow for extended activity. The Dispo soldier has an extended rib cage to protect more of itself in battle as well as extra fat built up over its right shoulder in order to allow for better management of recoil.

The Saigon nations released a statement saying that they have had reports of immense civilian casualties on a genocidal scale with zero survivors of many raided towns. By the time

that the GEP had pushed down into Thailand, the Saigon pact had suffered 10 million casualties and 12 million civilian deaths while only 1 million dispos had been eliminated. The Saigon pact announced a surrender to the GEP on January 3rd of 2034. After the surrender the GEP set up the South East Union, a government run by representatives from the nations of the GEP.

During the Southeast Asian War, META began an economic plan to invest in military defences within nations bordering GEP in a policy of containment similar to the NATO policy during the cold war. META now funding central Asian nations as well as those in Africa, China announced that they wish to push for a new human society and wish to get other nations to join into their new society.

### **Domestic Era of GEP and META**

The GEP announced a new initiative in order to make their technologies more integrated into civilian life. This new initiative took its first moves in 2035 when China mandated that all citizens must submit themselves for gene editing in order to allow for a more productive society by increasing muscle development and air filtration. China gave these treatments to other nations within the GEP allowing them to increase production capacity while limiting the damages of air pollution that has become prominent in both countries. Soon after the treatments were administered, those who refused to take the treatments were rounded up and then recycled as nutrient paste provided to Dispo soldiers, a policy that became more and more prominent as the need for resources increased.

During the same time the nations of META created a plan known as the Iron Forest initiative; a plan to create a large heavily dense industrial area in America, stretching from New York to Maine. This region is estimated to be completed by 2050, using new workers that are integrated with implants that allow for faster work. This complex is run directly by the government and will clear all wildlife in the region in order to complete the new regions development. The Iron Forest was protested heavily in the city of New York and protesters were met with with spine suit soldiers that had since been upgraded to include advanced armour and synthetic limbs. What followed was known as the industrial massacre, with the all 30,000 protesters eliminated and another 5,000 killed as collateral damage. The President of the United

States announced that the current president would not be standing down in order to allow for a more direct system of power. All those opposing the new government were often subject to disappearances.

### **“Peace” and Development**

New weapons and technologies were introduced during the period of this new cold war between the GEP and META nations with very little conflict being initiated between the years of 2036 and 2045, the following is a list of those technologies as well as the summation for political events during the time.

The META nations instituted an AI that would run all of their battle strategies and another that would manage infrastructure and domestic development. The two different AI's were named Foreign and Domestic for their information output. Domestic led to the completion of the Iron Forest earlier than scheduled in 2040.

META developed soldiers that were run as drones by infantry that would be led from a command center at the Iron Forest. These drone infantry resemble scorpions with weapons based on specialized limbs. These weapons were branded as a Chimera after the mythological beast. Spine suits were still produced as fear of a counter weapon was still prevalent.

Pakistan joined META in 2040 in an effort to prevent a Indian takeover. The debate on where to align was heated in Pakistan however the Indian threat was more prevalent than the possibility of being dragged into a war. The META reaction was very positive and spent billions of dollars to integrate defences into the Pakistani region.

The government of South Africa sought military investment from some of the new factions and the accompanying western values that allowed for swift movement towards META with some slight resentments to the purist ideology of isolationism that has excluded them from the world. South Africa was welcomed into META and heavily invested in as a post for META to the east.

## **“Peace” And “Safety”**

All three of the major forces in the world; the EU, GEP, and META signed into the Nordel treaty of 2039, a dream achieved after much diplomacy. The Nordel treaty was an agreement that all Nuclear nations would abandon any effort to maintain or develop nuclear weapons. The treaty, despite paranoia, worked flawlessly. The threat of nuclear annihilation has been removed from the world. Tensions still were incredibly strong between the GEP and META, however this created hope for the future.

The GEP developed several new weapons technologies during this time including a new type of clone labeled Ling Dao, a clone designed for maximum processing power. These new clones were used as either portable tactical computers, commanders, or generals. The Ling Dao were given more independence than most clones as they needed to go through education on history and tactics in order to be at peak effectiveness.

The GEP developed a complex in Xinjiang to turn their desert green. The project worked however the life was completely reliant on the complex. The GEP developed this technology into a new weapon known as a Badhane; a bomb that when dropped turns the surrounding land into an overgrowth within 24 hours. These bombs were incredibly popular due to the great infrastructure damage it creates.

Mexico signed into the GEP after continued American aggression pressured the Mexican economy into a subjugated element for American corporations. Mexico made the demand that the GEP provide defenses for the American border in the event of aggression as well as to keep citizens in check.

The GEP also accepted Japan and the newly unified Korea's into their organisation in order to protect Asian interests from META attempts to prevent evolution. The development of GEP as an Asian organisation now solidified the continent on one ideology.

## **The First War For Humanity**

The first war for humanity was between the nations of the GEP and META, the nations not belonging to either faction joined in with the European policy of isolationism however

Europe refused to allow for others to join in on their pact for fear of being dragged into a conflict.

The war started after fire was exchanged between Turkey and Greece on January 26 of 2046. It is still unclear on who fired the first shot, however neither side had called for a halt of fire stating that they would not negotiate with those who attack without meaning. The battle quickly spread across the world as forces were mobilized and commanders drew up battle plans.

The GEP started off the war with an advance on the nation of Greece, the name of this operation was plan 003 and managed to push a few miles into the border before being cut off by a multitude Chimera that eliminating most of the forces pushing through. The Dispo forces fell back to Istanbul where a siege was held by META against the GEP. Fortifications managed to hold back the counterattack however both sides had heavily fortified so an attack from either side became useless. Russians flanked from the west however were held back after heavy bombardment from Badhane that left them immobilized.

In South Asia, Pakistan was under attack from the full might of the Indian Army and despite the use of the Foreign AI Pakistan fell to the GEP in 2056. This conquest caused massive casualties to the Indian Army with 10 million clones dead. The conquest of Pakistan ended with the complete genocide of the Pakistani people.

The Central Asian front relied very heavily on the Trans Siberian railroad for META as they engaged operation homebase, a plan to attack the Chinese heartland by liberating the oppressed Xinjiang area. The operation was completed successfully with limited destruction of equipment however the AI when controlling the Chimera would show little mercy so the civilian mortality rate was at 99.92% . The Chinese immediately launched a wave of badhane to stall the META equipment to that the army could mobilize for a counter attack.

In Brazil, Chimera were dropped in by aircraft and attacked industrial centers and cloning facilities to disabled supply lines to prevent reinforcements from reaching Asia as well as setting up for a future invasion. Operation cutoff was greatly successful and introduced subversive guerrilla tactics called *harb khafia* (hidden war in Arabic), tactics that became prominent as both armies only relied on manufactured and developed weapons and not human soldiers.

After the development in Brazil the GEP looked to the Badhane as a weapon that would stop the development of META weapons. Arming missiles with Badhane and then preparing for a mass launch against META infrastructure to halt production on the weapons produced. *Harb khalifa* became the primary assault doctrine of both sides as a direct attack on the frontline would cause more damage than it would inflict. Attacks from both sides led to the deaths of millions on each side.

On the homefront both sides massive lash back on the war after 3 years of *harb khafia* in 2050. Protests in META nations called for an end to hostilities due to the massive loss of jobs due to great damage to the nation after badhane strikes. Overgrowths riddled the infrastructure of all those participating. The GEP nations faced rampaging Chimera in the countryside as they had most of their forces posted to the borders, civilian deaths were high and they demanded an immediate ceasefire however neither side would back down.

Just before the end of the first war the death toll was estimated to be at 1 billion lives lost in total from all around the world with the total being brought down to 7.5 billion people. Violent acts of protest started and in the Iron forest of America, protests were met with an attack from military forces.

### **The Second War for Humanity**

The second war began after the riots in the Iron forest were suppressed by Chimera, almost immediately citizens from around the nation rose up in revolt and with the majority of the armed forces in Russia the government fell quickly. Washington DC fell after three days of fighting with local police on July 1st 2055. The revolutionaries called themselves the Defensive Homeland Movement. Years of fighting in the first war

Immediately after the fall of the United States Russia allocated forces to push against the United States however the response was a revolt mimicking the Defensive Homeland Movement. Russia fell within ten days and revolutionaries took old equipment and armed themselves with it, stating that this was a war against META oppression.

With Revolutions in META erupting the GEP took this chance to push forward however they were met with their own series of revolts within their nation stemming from Central China and quickly spreading to India. Both major governments were quickly toppled.

The smaller nations without the support of larger coalition leaders fell to the revolutionaries as Dispo's and Chimera abandoned their positions and retreated to unknown locations. It is unknown where the soldiers of the old factions have moved to however they stopped firing and abandoned post under orders from an unclear source.

The second war for humanity lasted less than a year with a death toll of 40 million people and massive infrastructure damage. The war was concluded on December 23 2055 during the treaty of Vanuatu, where nations from all over the world, including a representative from Europe gathered to put the world back together.

### **The End of the Wars**

The first action taken at the end of the war was the treaty of Vanuatu that established borders and nations from the war. Russia was split into two parts, one in Moscow named Moscovia, and the second joined with Kazakhstan and Xinjiang becoming the North Asian Union. America was split into two parts, the Iron forest becoming its own nation and the rest remaining part of the same Union with the change of name to the American Federation. Saudi Arabia joined with Egypt to establish the Caliphate of Cairo. Greece remained its own nation and national pride allowed for the absence of a name change, the same went to Israel who had to be forced into the treaty by neighboring nations seeking peace. South African rebels attacked neighboring nations early on to expand their domain however the new empire quickly split in two after the treaty was signed, creating the Azanian confederation, and then African prosperity union.

China split up into the Xia Kingdom in the north and the Republic of New People in the south as old divides presented themselves disrupting the once unified China. The people of Southeast Asian Union found that they would remain stronger if separated and as a result the region was divided into East and West Siam. The Indian people faced a great issue on what to do

with the now empty region of Pakistan, the land was given to the the new Goan Democratic republic, taking up western provinces. The rest of India was given to the Socialist republic of Odisha. The Empire of the Sun was formed after the Japanese rebels joined up with the Koreans pushing for a widespread pacific empire the same dream of the Japanese during the 1930's however the capital remained in Seoul with a Korean center. Both Brazil and Mexican rebels joined together in the Empire of the New World. The Congo rebels also pushed into Angola and the rest of the Congo and created the Central African federation.

After the treaty of Vanuatu new nations went about trying to solidify power however the as the amount of damage became apparent a new conference was called to push for a more sustainable society using old technologies and forming cooperation to prevent any future wars of the same magnitude.

Soon after the Treaty of Vanuatu those in the region of California and Washington demanded a independence referendum and left before power could be consolidated and formed the Pacific Union.

Although left out of the conference the Turkish rebels declared their own government however they faced a more stiff resistance to their government and a continued struggle wages between the Turkish government and the Anatolian Republic

## **Current Information**

With the wars over and borders set by the treaty of Vanuatu nations are working to repair themselves and stabilize to prevent any further wars. The massive damage left over from the wars has had little reparation. The world still remains an unstable place with nations keeping some of the hate from the wars. Millions are dead and there is still violence around the world.

Nations around the world have sent expeditions to the regions that saw fighting during the First War for Humanity however nothing was found, there were no bodies or parts left over from the war, it is unclear as to wear the META and GEP technologies have vanished to.

There is still violence occurring in some nations; in the Anatolian Republic rebels still fight against the GEP government, in Norway there is silence in the North, and instability riddling all different nations around the world. The year is January 26, 2065

## Questions to Consider

1. How can stability be assured now that the wars are over
  - a. How can delegates prevent another war from occurring
    - i. What sort of preventative measures can we put in place as a global community
    - ii. How have the weapons of the wars changed warfare as a whole
  - b. How can delegates repair industries across the world
    - i. How should GEP and META facilities be managed
    - ii. What industries should be prioritised
    - iii. How can industry be protected in the future.

## Countries, Blocs, and basic position summary

### **The American Federation:**

The American federation created from the treaty of Vanuatu where it was given all previous American territories with the exception of the Iron Forest. As a nation with META technologies left behind there are vast amount of old weapons and facilities built in these regions. Even with the absence of the Pacific and Iron Forest there are still a lot of leftover weapons making the American Federation a formidable force.

### **Iron Forest**

As the previous industrial center for the META nations the Iron Forest is completely urban with massive factories and residential centers with no natural areas left (excluding small parks). With a large population and no farmland area, the Iron Forest depends on its neighbors

for food supplies in exchange for products and weapons. While Chimera are no longer produced in its factories, spine suits are still produced in moderation along with conventional weapons.

### **Moscova**

The “European” region of Russia that split off during the treaty of Vanuatu, this highly populated Area was once under META control and now wishes to break off from the old world, holding European ideals close as the devastation brought to the area is still present.

### **North Asian Union**

The North Asian Union was founded by Russian rebels who wanted to join the GEP however after the war was concluded they felt no need to move towards that Ideology. The North Asian Union has put funding towards expeditions in the skirmish areas to retrieve technology however the expeditions came up with zero results.

### **Caliphate of Cairo**

The people of Saudi Arabia and Egypt united after the war to become one nation, their previous META ties allowed for an easy transition into one two state government. The new state was led by one leader who labeled themselves a Caliph however the rest of the Muslim world refused to accept them as such.

### **Israel**

A very proud nation that while not contributing funds, it worked to develop technology for the META nations, as a result Israel of all states knows the most about the inner workings of the META weapons.

### **Greece**

A nation almost completely dependent on those around them for stability. While unstable, Greece has great amounts of weapons left over from the war, although Chimera are absent from their arsenal they remain well armed.

### **Azanian confederation**

The eastern half of the previously named South Africa containing Lesotho, Zimbabwe, and Mozambique. It acted as a base for the META nations and as a result has extensive dockyard facilities.

### **African Prosperity Union**

The western half of the previous South Africa containing Angola and Namibia. While the docks in this half are more limited than its counterpart, this region has a much more extensive infrastructure.

### **Pacific Union**

As a previous part of the American Federation and the USA it has the benefits of META infrastructure. The government in this region holds some resentment towards the American Federation after the separation.

### **Germany**

Germany acted as Europe's center for the entirety of the 21st century, with massive industries it supplies the arms and products for Europe. Germany, still holding to its promises of the 20th century has a very limited military.

### **France**

A nation untouched by the wars however many of its citizens have been great supporters of META, during the Second War for Humanity there was a small uprising in Normandy however it was put down quickly.

### **Britain**

A nation that after returning from Brexit pushed to fully integrate itself into Europe with large bridges constructed to allow the island to unite with the mainland.

### **Italy**

A nation with strong ties to its military after an attempted pro GEP revolt almost succeeded during the second war for humanity and was only put down after French forces moved in.

### **Canada**

Canada has held true to European values however pushed away from isolationism during the Second war for humanity when it tried to move into the iron forest however rebels prevented any advance.

### **Spain**

A region that has always been riddled with instability, during the second war for humanity it took British forces to maintain order. Still holding on to power the people of Spain are very divided and many wish to push away from the pure values of Europe

## **Sweden**

A nation that wishes to prevent any further violence, despite the world turning to revolution during the second war the Swedish people remained content with their government and supported humanitarian aid to be sent to the surrounding nations who dealt with revolution.

## **Norway**

A nation supporting the harsh laws against biohacking and built a large fortification in Scandinavia to protect from META. Norway has been absent from revolts however there are rumours that there is something attacking towns in the Arctic.

## **Poland**

As a nation on the border of Moskova and the previous META powerhouse Russia, Poland has received much support from other European nations in order to present the strong might of Europe.

## **Romania**

Romania is a nation on the forefront of Europe, being on the Black Sea it is close to Moskova and Anatolia, both GEP and META nations have been close to Romania so it has been a meeting point for when negotiations were required. Romania of all other European nations has the most foreign ties with businesses and leaders.

## **Xia Kingdom**

The Xia Kingdom is led by a monarch who was originally a general who led the original uprising in China. Xia is in the North of China and while the majority of Chinese industries were located in the Xia Kingdom, most of them were damaged or destroyed in the war. Xia expeditions to warzone factories have led to radio silence.

## **Republic of New People**

This nation while less developed with GEP technology holds great conventional infrastructure that is mostly undamaged. While hate of the old government is present this new government has been able to hold a stable society.

## **East Siam**

During the second war for humanity rebels retook SouthEast Asia and as a result they managed to develop themselves. The east maintains a great hate for China as the ideals of the Saigon pact remain strong. Most of its industries have been eliminated so it has received support from those in Europe. The old facilities of the GEP remain unexplored.

## **West Siam**

After the liberation of Saigon the rebels in the west of SouthEast Asia made advances and quickly pushed out the GEP government. The massive loss of life during the era of the Saigon pact has left the region with a limited population however GEP facilities allow for large automated production.

## **Goan Democratic Republic**

The GDR is has a large region of desolate waste in what used to be Pakistan, large migrations people have moved into this region however it nearly leveled after the war. The GDR is a wealth nation however must deal with the emptiness left behind from the Pakistani genocide.

## **Socialist Republic of Odisha**

The SRO has been focusing on stabilising its people to prevent any further uprising, with very limited damage done to the industries during the revolts and war. The government has given massive handouts to its people shifting into a government dominated economy, as a result of this it struggles to manage a proper military despite its massive industries.

## **Empire of the Sun**

After the revolutions both Korea and Japan in their new revolted forms decided that it would be best to unite under a common goal of bringing stability to Asia. With the capital in Seoul, the Empire of the Sun has promised the nations of the pacific that it will act to protect them whatever the cost. The Empire of the Sun has made prosperity in Asia its one goal.

## **Empire of the New World**

After being devastated by Chimera bombardment the ENW has limited industries however maintains great relations with Europe as it shifts away from GEP technologies. The inner regions of the Amazon are still unexplored by surveys dealing with damage. ENW consists of a dual government from Mexico and Brazil.

## **Central African Federation**

The Previously GEP aligned nation: the congo, now expanded into Angola as well used GEP technology to stabilize and push itself forward however now that GEP technology is being left behind it is at great risk of losing that same stability.

## **Anatolian Republic**

The Anatolian Republic is the only nation to not leave the second war for humanity. Rebels continue to fight forces from the old government, the Turkish Republic, where loyal forces fight instead of Dispos. The Anatolian Republic has been recognised as a nation by the outside world but no other nations have moved to help.
